SOFTWARE REQUIREMENTS SPECIFICATION (SRS)

Laundry Order Monitoring and Business Transparency System

1. Purpose

The system is a web-based laundry management system that connects the Customer, Employee, and Owner. Its main purpose is to make laundry orders easier to track, process, and monitor.It solves the work transparency, customer spending time going back and forth just to check if laundry was done, and staff hassle with data management.

2. Main Users

Customer

- View and track their laundry order
- See order status
- See estimated ready time
- Receive notifications
- View payment and pickup information

Employee

- Create laundry orders
- Record customer and laundry information
- Record weight and service
- Calculate and record payment
- Update order status
- Mark orders as ready
- Confirm pickup

Owner

- Monitor orders and transactions
- Manage employees, customers, services, and prices
- View employee activities
- View reports
- Check order changes and possible discrepancies

3. Main System Features

The system shall provide:

- User login and account management
- Laundry order management
- Weight and price recording
- Payment recording
- Order status tracking
- Estimated ready time
- Customer notifications
- Ready-for-pickup reminders
- Workload indicator
- Rush-order option
- Order history
- Audit/change history
- Owner reports

4. Order Process

The basic order process is:

Received → Weighed → Queued → Washing → Drying → Folding/Processing → Ready for Pickup → Claimed

The employee updates the order status while the customer can view the progress.

5. Transaction Transparency

The system records important changes such as:

- Weight changes
- Price changes
- Payment changes
- Service changes
- Status changes

For example, if the weight changes from 20 kg to 15 kg, the system records the old weight, new weight, difference, employee, date/time, and reason. This allows the owner to review the change.

6. Security Requirements

The system shall:

- Require user login
- Give different access to Customer, Employee, and Owner
- Protect customer information
- Prevent users from accessing information they are not allowed to see
- Keep records of important changes

7. Expected Result

The system should help customers know the status of their laundry, employees process orders more easily, and owners monitor transactions and business activities more clearly.

Main Goal:
Customer Visibility + Employee Efficiency + Owner Transparency
